ACRT-19-06-06

CHRISTCHURCH

AIRFRAME COMPONENT REPAIR TECHNOLOGIES

EASA and FAA Part 145 approved.

Offers unrivalled service in the civil repair and overhaul market.

Principal areas of expertise are flying control surfaces (flaps, fairings, slats, rudders, spoilers and ailerons).

ACRT can provide the complete service with integrity, quality and reliability, whether an exchange component part or overhaul item.

Building on 50 years of aerospace airframe structure manufacturing and repair experience, ACRT offers a comprehensive repair capability to address the needs of civil MRO requirements.

Working with strategic partners we are able to support airline requirements with services beyond the traditional repair process, aiming to deliver a service that meets the demanding environment presented today.

125 Ventral Fairing Composite repair

REPAIR AND OVERHAUL.

Comprehensive component repair and overhaul capability is provided in the Christchurch facility.

Working to both SRM and non SRM Repairs, the full manufacturing capability of the site ensures minimum turn round times on your assets.

Other capabilities.

Working with key strategic partners we aim to provide rotatable components to reduce TRT's further. Our stock of components is closely matched to our customers maintenance requirements.
